

DIBBLE'S PRICE LIST

from

Edward F. Dibble Seedgrower, Honeoye Falls, N.Y.

January 16, 1961

To our customers and friends:

When Winter comes, can Spring be far behind?

We offer in this Price List the highest quality of Farm Seeds that can be obtained and varieties that are adapted to our Northeastern farms.

For 70 years the Dibble motto has always been, **"Farm Seeds and Farm Seeds only; One Grade and That the Best Obtainable at the Lowest Price Consistent With the Highest Quality."**

The Policy of Our Company is Plain and Simple — to furnish Farm Seeds that we are proud to sow ourselves.

We can ship all seeds except potatoes at once or as you may direct, and can hold potatoes until weather conditions are favorable, or we will book your order to be called for at our warehouse.

May we furnish you with the Farm Seeds you are going to need for 1961?

Sincerely yours,

EDWARD F. DIBBLE SEEDGROWER

HARWOOD MARTIN, PRESIDENT

Officers: HARWOOD MARTIN, President and Treasurer

DEAN G. MARTIN, Vice-President

RALPH E. MARTIN, Secretary

Conditions of Sale

We assume responsibility that the seeds or tubers reach the purchaser in good condition. We offer to refund the purchase price of any seeds or tubers found by tests to be unsatisfactory to you within ten days after the seeds or tubers reach you. In common with all responsible seedsmen "The Edward F. Dibble Seedgrower Company warrants to the extent of the purchase price that seeds or tubers sold are as described on the containers within recognized tolerances. Seller gives no other or further warranty express or implied."

Complete prices on pages 3 and 4.

Dibble's for quality and dependability for 70 years.

ALFALFA SEED

NARRAGANSETT

NARRAGANSETT ALFALFA is a new Northeastern-bred variety which has the widest soil and management adaptation of any alfalfa recommended for the Northeast.

On soils of marginal drainage for alfalfa, Narragansett, compared with other varieties, establishes better stands that live for years.

Narragansett, if properly limed and fertilized, can extend successful alfalfa production to many farms with moderately drained soils. 15 lbs. per acre if seeded alone.

Mixture for Hay, Silage or Pasture

Narragansett Alfalfa	6 lbs. or 3 qts.
Viking Birdsfoot Trefoil	4 lbs. or 2 qts.
Timothy (pref. Climax)	6 lbs. or 4 qts.
TOTAL for one acre	16 lbs. or 9 qts.

RANGER

RANGER ALFALFA, a long-lived Alfalfa, is highly resistant to bacterial wilt. It is winter hardy and is therefore well suited to our Northeastern conditions where a long-lived stand is desired. We recommend Ranger as the variety to use where wilt may be a factor, and if you wish to leave the seeding for a period of several years.

VERNAL

VERNAL ALFALFA is a high-yielding, winter-hardy, wilt resistant variety that was developed in Wisconsin. Recommended for the same conditions as Ranger, or as a substitute for Narragansett. (VERNAL may replace Ranger when ample seed supplies are available.)

DU PUIITS

DU PUIITS ALFALFA is of French origin and the highest yielding variety on the fertile soils of the Northeast for stands up to three years. Du Puits starts growth earlier in the spring, recovers faster and continues growth later in the fall than other recommended varieties. On three cuttings (starting late May or early June) over five tons per acre may be expected. Successful stands of Du Puits have been established on soils of moderate drainage.

COMMON

COMMON ALFALFA may be used on natural Alfalfa soils of the East where Common Alfalfa has grown successfully and where it is to be left down only two of three years.

DIBBLE'S Seed Oats

HIGH YIELDING VARIETIES FOR THE NORTHEAST

ONEIDA — New Disease-Resistant Variety

Oneida is a new high-yielding mid-season spring oat for the Northeast, released by Cornell after extensive trials. It was designed to give greater protection against black stem disease which has been responsible for severe stem break and lodging in other varieties.

DESIRABLE FEATURES OF ONEIDA OATS

1. Very stiff straw.
2. Medium height.
3. Medium early.
4. Marked tolerance to black stem.
5. High resistance to crown and stem rust.
6. Almost complete resistance to loose smut.

DIBBLE'S GARRY

The Garry Oat originates from the Dominion Laboratories at Winnipeg, Canada and this is the sixth year that seed has been available to our Northeast farmers. It is the predominant variety grown in New York State and continues to be an outstanding variety where black stem is not a factor. It is hard to beat for yielding ability.

The Garry Oat has exceptional stooling ability and maximum yields may be obtained by planting 2 bushels per acre.

DIBBLE'S RODNEY

Rodney, a Canadian-bred oat has proven to be a very desirable Oat for our Northeast territory. Rodney yields about the same as the Garry and has about the same height and stiffness of straw. It is five days later than Garry and has a very heavy kernel. Sow 2 to 2½ bushels per acre.

Maturity Guide

FOR DIBBLE'S SEED CORN

EARLY

100 days

Michigan 250

Mainly for grain production in New York State above elevations of 600 feet and early to medium seasons of the Northeast. Excellent for early silage producers.

MEDIUM

110 to 115 days

Cornell M-3 (Outstanding New Variety)

Cornell M-4

Cornell M-10

Penn. 444

For grain in the good growing sections of western New York State and similar seasons of the Northeast, Excellent yields for silage at elevations around 800 feet in New York State and similar seasons of the Northeast.

MEDIUM LATE

115 to 125 days

Ohio K-62

Ohio K-24

Extremely heavy silage producers for the good Corn-growing dairy sections in New York State and the Northeast. For grain in the best Corn-growing sections of the Lower Hudson, Long Island, Pennsylvania, New Jersey and Connecticut.

LATE

130 days

West Branch Sweepstakes

Lancaster County Sure Crop

Open-pollinated varieties that produce high yields of silage in the best growing sections of the Northeast.

MATERIALS FOR SEED TREATMENT

NODOGEN

The Pre-Tested Inoculator

Use NODOGEN on all legumes.

1. Bigger crop yields (10 to 50%).
2. Build more protein in hay and forage.
3. Add valuable nitrogen to your soil.

When ordering Nodogen, specify kind of seed to be inoculated.

HAY and PASTURE MIXTURES

BIRDSFOOT TREFOIL MIXTURES

FOR HAY, SILAGE OR PASTURE

Birdsfoot Trefoil 7 lbs. or 3½ qts.
Timothy 5 lbs. or 3½ qts.
Total for 1 acre 12 lbs. or 7 qts.

This mixture is suitable for long rotations and for areas to be left continuously in hay or pasture. It is recommended only where the seeding is to be left down for three years or longer.

Empire Trefoil is first choice for long-term stands on acres difficult to plow or for continuous grazing. It will also cut high-quality hay from 10 to 20 days later than Red Clover or the European type.

European or Viking Trefoil is better suited for hay and may be used for rotated pastures. Hay yields higher than Empire and matures at time of Red Clover; establishes itself quicker and recovers faster after cutting.

FOR FIELDS WITH SPOTTY DRAINAGE

Narragansett Alfalfa 6 lbs. or 3 qts.
Viking Birdsfoot Trefoil 4 lbs. or 2 qts.
Timothy (preferably Climax) 6 lbs. or 4 qts.
Total for one acre 16 lbs. or 9 qts.

ALFALFA MIXTURES

FOR HAY, SILAGE OR PASTURE

Alfalfa 4 lbs. or 2 qts.
Medium Red Clover 4 lbs. or 2 qts.
Ladino Clover 1 lb. or ½ qt.
Timothy 2 lbs. or 4 qts.
Total for one acre 15 lbs. or 8½ qts.

The proportion of Alfalfa should vary from 6 to 2 pounds according to how favorable the situation is for Alfalfa. As the Alfalfa is reduced, the Clover should be increased correspondingly.

Eight pounds of Brome Grass, sown separately, may be used in place of Timothy when most of the soil is well drained.

FOR HAY OR SILAGE

Alfalfa 8 lbs. or 4 qts.
Timothy 6 lbs. or 4 qts.
Total for one acre 14 lbs. or 8 qts.

Timothy is more easily and quickly established than Smooth Brome Grass on land that is not in a high state of fertility.

FOR HAY OR SILAGE

Alfalfa 8 lbs. or 4 qts.
Smooth Brome Grass 8 lbs. or 15 qts.
Total for one acre 16 lbs. or 22 qts.
